

# Compact rooftop air conditioner AUSTRAL B & AUSTRAL Combi

The AUSTRAL B (Air conditioning only) and AUSTRAL Combi (Air conditioning and heating) compact air conditioners are easily adapted to all types of cabs in which the inside space is insufficient to contain integrated equipment. Fitting the AUSTRAL B and AUSTRAL Combi on the back of the rooftop eliminates the risk of protruding beyond the top of the cab.

Condenser, evaporator, filter drier, pressure switches and control devices are all contained in the one unit. This unit is to be connected to the compressor through 2 hoses.

The AUSTRAL B and AUSTRAL Combi are equipped with a combined dust and active carbon filtration system.

The AUSTRAL B and AUSTRAL Combi are available in white or black and in 12 or 24 V.
